zoo	35	50	41

- The cinema is by far the most popular free-time activity for most people. To be specific, 70% Canadians and 65% migrants from English-speaking countries choose it. Although it is not the most popular choice for the migrants from non-English-speaking areas, the figure is relatively high at 50%. Noticeably, 5% more of this group tend to choose the library, while the figures for remaining two groups are not high at approximately 40% on average.

- The maps demonstrate the changes in the layout of Grand park between 1920 and the present.
- Looking from an overall perspective, it is apparent that this park has witnessed enormous transformations where there are more places for recreation available than before.

X2

认准李仙童 雅思稳准狠

- The most striking change is in the center of the park where the fountain has been removed in favour of a rose garden with full seating around it. To the left of the new garden, the previous stage for musicians has been turned into a much larger amphitheater facing the opposite direction that will allow for concerts in the park. This change has necessitated the removal of both seating on the far left side as well as the rose garden in the bottom left corner of the map.

X2

认准李仙童 雅思稳准狠

- The entrances at the top and bottom in the middle have remained unchanged but on the right side a cafe has replaced the rose garden and where there was a pond for water plants in the top right corner, there is now a children's play area. Instead of the pond, a water feature has been built occupying the bottom right corner (replacing a glasshouse and some seats). Finally, leading to the water park is a new entrance for an underground car park.

- The diagram highlights the steps involved in the production of recycled bottles.
- Looking from an overall perspective, it is apparent that this circular process is comprised of 3 main stages including initial collection and sorting, followed by processing and cleaning, and finally reconstitution into a novel material for further usage.

- Recycling **commences when** an individual places their rubbish in a designated recycling bin, **prior to** being loaded into specialized garbage trucks. **After** transportation to the recycling center, the plastic bottles are sorted by hand, compressed tightly to form blocks **and then** crushed into small pieces and washed.
- **The next stages involve** transformation into a reusable material. The pieces of plastic **are first** poured into a machine **that** turns them into pellets. These pellets are then heated **in order to** create a raw material that can be used in the manufacture of products ranging from clothes and bottles to containers and pencils. These items are themselves recyclable **and the process begins again.**
