Thelonious Monk, who was a jazz pianist and composer, produced a body of work both rooted in the stride-piano tradition of Willie (The Lion) Smith and Duke Ellington, yet in many ways he stood apart from the mainstream jazz repertory.

选项 :

- A.Thelonious Monk, who was a jazz pianist and composer, produced a body of work both rooted
- B.Thelonious Monk, the jazz pianist and composer, produced a body of work that was rooted both
- C.Jazz pianist and composer Thelonious Monk, who produced a body of work rooted
- D.Jazz pianist and composer Thelonious Monk produced a body of work that was rooted
- E.Jazz pianist and composer Thelonious Monk produced a body of work rooted both

题号 : 3(qid:1092)

题目 : Highway Official: When resurfacing our concrete bridges, we should use electrically conductive concrete (ECC) rather than standard concrete. In the winter, ECC can be heated by passing an electric current through it, thereby preventing ice buildup. The cost of the electricity needed is substantially lower than the cost of the de-icing salt we currently use.

Taxpayer: But construction costs for ECC are much higher than for standard concrete, so your proposal is probably not justifiable on economic grounds.

Which of the following, if true, could best be used to support the highway official's proposal in the face of the taxpayer's objection?

选项 :

- A.The use of de-icing salt causes corrosion of the reinforcing steel in concrete bridge decks and damage to the concrete itself, thereby considerably shortening the useful life of concrete bridges.
- B.Severe icing conditions can cause power outages and slow down the work of emergency crews trying to get power restored.
- C.In weather conditions conducive to icing, ice generally forms on the concrete surfaces of bridges well before it forms on parts of the roadway that go over solid ground.
- D.Aside from its potential use for de-icing bridges, ECC might also be an effective means of keeping other concrete structures such as parking garages and airport runways ice free.
- E.If ECC were to be used for a bridge surface, the electric current would be turned on only at times at which ice was likely to form.

题号 : 4(qid:1093)

题目 :

Which of the following most logically completes the passage?

Appendicitis (inflammation of the appendix) is potentially fatal; consequently, patients with symptoms strongly suggesting appendicitis almost always have their appendix removed. The appropriate surgery is low-risk but performed unnecessarily in about 20 percent of all cases. A newly developed internal scan for appendicitis is highly accurate, producing two misdiagnoses for every 98 correct diagnoses. Clearly, using this test, doctors can largely avoid unnecessary removals of the appendix without, however, performing any fewer necessary ones than before, since _____.

选项 :

- A.the patients who are correctly diagnosed with this test as not having appendicitis invariably have medical conditions that are much less serious than appendicitis
- B.the misdiagnoses produced by this test are always instances of attributing appendicitis to someone who does not, in fact, have it
- C.all of the patients who are diagnosed with this test as having appendicitis do, in fact, have appendicitis
- D.every patient who is diagnosed with this test as having appendicitis has more than one of the symptoms generally associated with appendicitis
- E.the only patients who are misdiagnosed using this test are patients who lack one or more of the symptoms that are generally associated with appendicitis

题目 :

Heirloom tomatoes, grown from seeds saved from the previous year, only look less appetizing than their round and red supermarket cousins, often green and striped, or have plenty of bumps and bruises, but are more flavorful.

选项：

- A.cousins, often green and striped, or have plenty of bumps and bruises, but are
- B.cousins, often green and striped, or with plenty of bumps and bruises, although
- C.cousins, often green and striped, or they have plenty of bumps and bruises, although they are
- D.cousins; they are often green and striped, or with plenty of bumps and bruises, although
- E.cousins; they are often green and striped, or have plenty of bumps and bruises, but they are

文章： Seventeenth-century philosopher John Locke stated that as much as 99 percent of the value of any useful product can be attributed to "the effects of labor." For Locke's intellectual heirs it was only a short step to the "labor theory of value," whose formulators held that 100 percent of the value of any product is generated by labor (the human work needed to produce goods) and that therefore the employer who appropriates any part of the product's value as profit is practicing theft.

Although human effort is required to produce goods for the consumer market, effort is also invested in making capital goods (tools, machines, etc.), which are used to facilitate the production of consumer goods. In modern economies about one-third of the total output of consumer goods is attributable to the use of capital goods. Approximately two-thirds of the income derived from this total output is paid out to workers as wages and salaries, the remaining third serving as compensation to the owners of the capital goods. Moreover, part of this remaining third is received by workers who are shareholders, pension beneficiaries, and the like. **The labor theory of value systematically disregards the productive contribution of capital goods**—a failing for which Locke must bear part of the blame.

题号：7(qid:1096)

题目：

According to the author of the passage, which of the following is true of the distribution of the income derived from the total output of consumer goods in a modern economy?

选项：

- A.Workers receive a share of this income that is significantly smaller than the value of their labor as a contribution to total output.
- B.Owners of capital goods receive a share of this income that is significantly greater than the contribution to total output attributable to the use of capital goods.
- C.Owners of capital goods receive a share of this income that is no greater than the proportion of total output attributable to the use of capital goods.
- D.Owners of capital goods are not fully compensated for their investment because they pay out most of their share of this income to workers as wages and benefits.
- E.Workers receive a share of this income that is greater than the value of their labor because the labor theory of value overestimates their contribution to total output.

题号：8(qid:1097)

题目：

The author of the passage is primarily concerned with

选项：

- A.criticizing Locke's economic theories
- B.discounting the contribution of labor in a modern economy
- C.questioning the validity of the labor theory of value
- D.arguing for a more equitable distribution of business profits
- E.contending that employers are overcompensated for capital goods

题号：9(qid:1135)

题目：

Which of the following arguments would a proponent of the labor theory of value, as it is presented in the first paragraph, be most likely to use in response to the statement that 'The labor theory of value systematically disregards the productive contribution of capital goods' (in the highlighted text)?

选项：

- A.The productive contributions of workers and capital goods cannot be compared because the productive life span of capital goods is longer than that of workers.
- B.The author's analysis of the distribution of income is misleading because only a small percentage of workers are also shareholders.
- C.Capital goods are valuable only insofar as they contribute directly to the production of consumer goods.
- D.The productive contribution of capital goods must be discounted because capital goods require maintenance.
- E.The productive contribution of capital goods must be attributed to labor because capital goods are themselves products of labor.

题目：

Biologists working in Spain say that their discovery of teeming life in a highly acidic river may not only broaden the search for life, or for evidence of past life, on other planets but also show that a number of forms of microscopic life can adapt to conditions that scientists have long thought hostile to all but the hardiest bacteria.

选项：

- A.show that a number of forms of microscopic life can adapt to conditions that scientists have long thought hostile to all but the hardiest bacteria
- B.may show that a number of forms of microscopic life is capable of adapting to conditions that scientists have long thought hostile to all bacteria but the hardiest ones
- C.shows a number of forms of microscopic life to be capable to adapt to conditions that scientists have long thought had been hostile to all but the hardiest bacteria

D.showing that a number of forms of microscopic life is capable of adapting to conditions that scientists have long thought had been hostile to all but the hardiest bacteria

E.showing that a number of forms of microscopic life can adapt to conditions that scientists have long thought hostile to all bacteria but the hardiest

题号 : 14(qid:1154)

题目 :

When storing Renaissance oil paintings, museums conform to standards that call for careful control of the surrounding temperature and humidity, with variations confined within narrow margins. Maintaining this environment is very costly, and recent research shows that even old oil paint is unaffected by wide fluctuations in temperature and humidity. Therefore, museums could relax their standards and save money without endangering their Renaissance oil paintings.

Which of the following is an assumption on which the argument depends?

选项 :

A.Renaissance paintings were created in conditions involving far greater fluctuations in temperature and humidity than those permitted by current standards.

B.Under the current standards that museums use when storing Renaissance oil paintings, those paintings do not deteriorate at all.

C.Museum collections typically do not contain items that are more likely to be vulnerable to fluctuations in temperature and humidity than Renaissance oil paintings.

D.None of the materials in Renaissance oil paintings other than the paint are vulnerable enough to relatively wide fluctuations in temperature and humidity to cause damage to the paintings.

E.Most Renaissance oil paintings are stored in museums located in regions near the regions where the paintings were created.

文章 : In her account of unmarried women's experiences in colonial Philadelphia, Wulf argues that educated young women, particularly Quakers, engaged in resistance to patriarchal marriage by exchanging poetry critical of marriage, copying verse into their commonplace books. Wulf suggests that this critique circulated beyond the daughters of the Quaker elite and middle class, whose commonplace books she mines, proposing that Quaker schools brought it to many poor female students of diverse backgrounds.

Here Wulf probably overstates Quaker schools' impact. At least three years' study would be necessary to achieve the literacy competence necessary to grapple with the material she analyzes. In 1765, the year Wulf uses to demonstrate the diversity of Philadelphia's Quaker schools, 128 students enrolled in these schools. Refining Wulf's numbers by the information she provides on religious affiliation, gender, and length of study, it appears that only about 17 poor non-Quaker girls were educated in Philadelphia's Quaker schools for three years or longer. While Wulf is correct that a critique of patriarchal marriage circulated broadly, Quaker schools probably cannot be credited with instilling these ideas in the lower classes. Popular literary satires on marriage had already landed on fertile ground in a multiethnic population that embodied a wide range of marital beliefs and practices. These ethnic and class-based traditions themselves challenged the legitimacy of patriarchal marriage.

题号 : 15(qid:1162)

题目 : The primary purpose of the passage is to

选项 :

- A.argue against one aspect of Wulf's account of how ideas critical of marriage were disseminated among young women in colonial Philadelphia
- B.discuss Wulf's interpretation of the significance for educated young women in colonial Philadelphia of the poetry they copied into their commonplace books
- C.counter Wulf's assertions about the impact of the multiethnic character of colonial Philadelphia's population on the prevalent views about marriage
- D.present data to undermine Wulf's assessment of the diversity of the student body in Quaker schools in colonial Philadelphia
- E.challenge Wulf's conclusion that a critique of marriage was prevalent among young women of all social classes in colonial Philadelphia

题号 : 16(qid:1164)

题目 :

According to the passage, which of the following was true of attitudes toward marriage in colonial Philadelphia?

选项 :

- A.Exemplars of a critique of marriage could be found in various literary forms, but they did not impact public attitudes except among educated young women.
- B.The diversity of the student body in the Quaker schools meant that attitudes toward marriage were more disparate there than elsewhere in Philadelphia society.
- C.Although critical attitudes toward marriage were widespread, Quaker schools' influence in disseminating these attitudes was limited.
- D.Criticisms of marriage in colonial Philadelphia were directed at only certain limited aspects of patriarchal marriage.
- E.The influence of the wide range of marital beliefs and practices present in Philadelphia's multiethnic population can be detected in the poetry that educated young women copied in their commonplace books.

题号 : 17(qid:1180)

题目 : The author of the passage implies which of the following about the poetry mentioned in the first paragraph?

选项 :

- A.Wulf exaggerates the degree to which young women from an elite background regarded the poetry as providing a critique of marriage.
- B.The circulation of the poetry was confined to young Quaker women.
- C.Young women copied the poetry into their commonplace books because they interpreted it as providing a desirable model of unmarried life.
- D.The poetry's capacity to influence popular attitudes was restricted by the degree of literacy necessary to comprehend it.
- E.The poetry celebrated marital beliefs and practices that were in opposition to patriarchal marriage.

题号 : 18(qid:1181)

题目 :

Which of the following, if true, would most seriously undermine the author's basis for saying that Wulf overstates Quaker schools' impact (the highlighted text) ?

选项 :

- A.The information that Wulf herself provided on religious affiliation and gender of students is in fact accurate.
- B.Most poor, non-Quaker students enrolled in Quaker schools had completed one or two years' formal or informal schooling before enrolling.
- C.Not all of the young women whose commonplace books contained copies of poetry critical of marriage were Quakers.
- D.The poetry featured in young women's commonplace books frequently included allusions that were unlikely to be accessible to someone with only three years' study in school.
- E.In 1765 an unusually large proportion of the Quaker schools' student body consisted of poor girls from non-Quaker backgrounds.

题目 : In 1850 Lucretia Mott published her *Discourse on Women*, arguing in a treatise for women to have equal political and legal rights and for changes in the married women's property laws.

选项 :

- A.arguing in a treatise for women to have equal political and legal rights
- B.arguing in a treatise for equal political and legal rights for women
- C.a treatise that advocates women's equal political and legal rights
- D.a treatise advocating women's equal political and legal rights
- E.a treatise that argued for equal political and legal rights for women

题号 : 21(qid:1184)

题目：

Which of the following most logically completes the passage?

Mastitis is an infection of the udder in cows that, although not dangerous, causes them to give poor-quality milk. Most cases of mastitis are caused by the bacterium *Staphylococcus aureus*, against which antibiotics are ineffective. However, a related bacterium, *Staphylococcus simulans*, quickly clears up even severe infections of *S. aureus* simply by displacing the bacteria. *S. simulans* is nevertheless unlikely to become the preferred treatment for cases of mastitis, since _____.

选项：

- A.certain dangerous bacteria that normally cannot take hold can do so in the presence of *S. simulans*
- B.the current resistance of *S. aureus* to antibiotics derives in part from a past pattern of overuse of those antibiotics
- C.the milk from cows infected with *S. aureus* is generally not of such poor quality as to be entirely unusable
- D.careful farming practice can reduce the incidence of mastitis to a minimum
- E.the only symptom of mild cases of mastitis is the deterioration in the quality of the milk produced

题号：22(qid:1185)

题目：

An overwhelming proportion of the most productive employees at SaleCo's regional offices work not eight hours a day, five days a week, as do other SaleCo employees, but rather ten hours a day, four days a week, with Friday off. Noting this phenomenon, SaleCo's president plans to increase overall productivity by keeping the offices closed on Fridays and having all employees work the same schedule—ten hours a day, four days a week.

Which of the following, if true, provides the most reason to doubt that the president's plan, if implemented, will achieve its stated purpose?

选项：

- A.Every employee of SaleCo who has been there for at least a year is entitled to three weeks of vacation each year and must be paid his or her regular salary for that time off.
- B.None of the employees who work four days a week had volunteered to work that schedule, but all were assigned to it by their supervisors.
- C.Working ten hours a day has allowed the most productive employees to work two hours alone each day in their respective offices relatively undisturbed by fellow employees.
- D.Employees at SaleCo are compensated not on the basis of how many hours a week they work but on the basis of how productive they are during the hours they are at work.
- E.Some of SaleCo's employees have indicated to company officials that they would quit if not allowed to work the same hours as the company's most productive employees.

文章： Earth's surface consists of rigid plates that are constantly shifting and jostling one another. Plate movements are the surface expressions of motions in the mantle—the thick shell of rock that lies between Earth's crust and its metallic core. Although the hot rock of the mantle is a solid, under the tremendous pressure of the crust and overlying rock of the mantle, it flows like a viscous liquid. The mantle's motions, analogous to those in a pot of boiling water, cool the mantle by carrying hot material to the surface and returning cooler material to the depths. When the edge of one plate bends under another and its cooler material is consumed in the mantle, volcanic activity occurs as molten lava rises from the downgoing plate and erupts through the overlying one.

Most volcanoes occur at plate boundaries. However, certain "misplaced" volcanoes far from plate edges result from a second, independent mechanism that cools the deep interior of Earth. Because of its proximity to Earth's core, the rock at the base of the mantle is much hotter than rock in the upper mantle. The hotter the mantle rock is, the less it resists flowing. Reservoirs of this hot rock collect in the base of the mantle. When a reservoir is sufficiently large, a sphere of this hot rock forces its way up through the upper mantle to Earth's surface, creating a broad bulge in the topography. The "mantle plume" thus formed, once established, continues to channel hot material from the mantle base until the reservoir is emptied. The surface mark of an established plume is a hot spot—an isolated region of volcanoes and uplifted terrain located far from the edge of a surface plate. Because the source of a hot spot remains fixed while a surface plate moves over it, over a long period of time an active plume creates a chain of volcanoes or volcanic islands, a track marking the position of the plume relative to the moving plate. The natural history of the Hawaiian island chain clearly shows the movement of the Pacific plate over a fixed plume.

题号：23(qid:1186)

题目：

It can be inferred from the passage that a chain of volcanoes created by a mantle plume would most likely be characterized by

选项：

- A.a curved outline
- B.constituent volcanoes that differ from each other in age
- C.occurrence near a plate boundary where one plate bends under another
- D.appearance near many other volcanic chains
- E.rocks with a wide range of chemical composition

题号：24(qid:1187)

题目：

According to the passage, a hot spot on Earth's surface is an indication of which of the following?

选项：

- A.An untapped reservoir of hot rock in the base of the mantle
- B.Volcanic activity at the edge of a plate
- C.Solid mantle rock under tremendous pressure
- D.The occurrence of a phenomenon unique to the Pacific plate
- E.A plume of hot mantle rock originating near Earth's core

题号 : 25(qid:1188)

题目 : The passage is primarily concerned with discussing

选项 :

- A.the composition of Earth's mantle
- B.how the Hawaiian Islands were created
- C.what causes Earth's surface plates to move
- D.two different mechanisms by which volcanoes are formed
- E.why most volcanoes occur at plate boundaries

题号 : 26(qid:1189)

题目 :

The author's reference to the Hawaiian Islands serves primarily to

选项 :

- A.provide an example of a type of volcanic activity that does not occur elsewhere
- B.identify the evidence initially used to establish that the Pacific plate moves
- C.call into question a theory about the source of the volcanoes that created the Hawaiian Islands
- D.illustrate the distance from plate edges at which volcanoes typically appear
- E.provide an example of how mantle plumes manifest themselves on Earth's surface

题目：

In the past, most children who went sledding in the winter snow in Verland used wooden sleds with runners and steering bars. Ten years ago, smooth plastic sleds became popular; they go faster than wooden sleds but are harder to steer and slow. The concern that plastic sleds are more dangerous is clearly borne out by the fact that the number of children injured while sledding was much higher last winter than it was ten years ago.

Which of the following, if true in Verland, most seriously undermines the force of the evidence cited?

选项：

- A.A few children still use traditional wooden sleds.
- B.Very few children wear any kind of protective gear, such as helmets, while sledding.
- C.Plastic sleds can be used in a much wider variety of snow conditions than wooden sleds can.
- D.Most sledding injuries occur when a sled collides with a tree, a rock, or, another sled.
- E.Because the traditional wooden sled can carry more than one rider, an accident involving a wooden sled can result in several children being injured.

题目：

A manufacturer of workstations for computer-aided design seeks to increase sales to its most important corporate customers. Its strategy is to publish very low list prices for workstations in order to generate interest among the buyers for those corporations.

Which of the following, if characteristic of the marketplace, would tend to cause the manufacturer's strategy to fail?

选项：

- A.The proposed list prices would seem low to a typical buyer for the manufacturer's most important corporate customers.
- B.The capabilities of workstations suitable for given jobs are not significantly different among various manufacturers.
- C.The manufacturer's most important corporate customers employ as buyers persons who are very knowledgeable about prices for workstations for customer-aided design.
- D.Customers differ significantly in the percentage of resources they can devote to computer workstations.
- E.Buyers for corporations that purchase workstations for computer-aided design receive bonuses for negotiating large discounts from the list price.
