2. The graph at left in the yI -plane shows the interest rate percentage, I , one can expect for a savings account lasting y years up to a maximum of 10 years. Accounts lasting for less than 1 year are short-lived and accounts lasting for more than 5 years are long-lived. What is the significance of the I -intercept?

- A. Short-lived accounts have the minimum interest rate of 6 percent.
- B. Long-lived accounts have the minimum interest rate of 6 percent.
- C. Long-lived accounts have the maximum interest rate of 11 percent.
- D. The average increase in interest rates is 0.5 percent per year.

3. The graph at left in the th -plane shows Brayden's height, h , in inches above the ground, t seconds after he jumps. What is the best interpretation of the t -intercepts of the graph?

- A. Brayden jumped 0.6 feet into the air.
- B. Brayden jumped 0.6 times per second.
- C. Brayden remained in the air for 0.6 seconds.
- D. Brayden reached the peak of his jump after 0.6 seconds.

5. The plot at left in the yD -plane shows the depth, D , in meters of a volcanic lake exactly y years after the date of first recording. What is the significance of the point plotted on the D -axis?

- A. The most recently recorded depth is 175 m.
- B. The depth of the lake is approximately decreasing.
- C. The maximum recorded depth occurred on the first recording.
- D. The volcanic lake disappears 225 years after first recording.

6. The graph at left in the RI -plane shows the current, I , in amperes for a circuit with a resistor having R ohms of resistance. What is the significance of the value $I=4$ shown by the dotted line?

- A. The current for a resistor with 0 ohms of resistance is 4 amperes.
- B. The current reaches a minimum when the resistor has a resistance of 4 ohms.
- C. As the current becomes large, the resistance becomes approximately 4 ohms.
- D. As the resistance becomes large, the current becomes approximately 4 amperes.

7. The acceleration, a , in meters per second squared (m/s^2) due to gravity is 0 at the Earth's center. It reaches a maximum of 9.8 m/s^2 at the surface of the earth approximately 4 thousand miles (mi) from the Earth's center. If d represents the distance from the Earth's center in thousands of miles, which of the following graphs in the da -plane could represent this relationship?

8. The graph at left in the sT -plane shows the temperature, T , of a thermite reaction s seconds after ignition. What is the average rate of increase in temperature per second between $s=0$ and $s=15$ in degrees Celsius per second?

- A. 110
- B. 140
- C. 550
- D. 1650

9. The plot at left in the Th -plane shows how the height, h , in inches (in) of the first bounce of a ball dropped from 3 feet depends on the temperature, T , in degrees Fahrenheit ($^{\circ}$ F). What is the significance of the value $h=27$ as shown by the dotted line?

- A. The ball reaches a height of 80 in at a temperature of 0° F.
- B. The ball reaches a height of 80 in at a temperature of 27° F.
- C. The ball reaches a maximum height of 27 in across all temperatures shown.
- D. The ball reaches a maximum height of 27 in approximately 80 in along its trajectory.

10. The graph at left in the ta -plane shows the acceleration, a , in meters per second per second (m/s^2) of a dropped elastic ball t milliseconds (ms) after the ball impacts a tile surface. What is the significance of the graph at $t=15ms$?

- A. The elastic ball touches the ground for 30ms.
- B. The elastic ball reaches its greatest height 15ms after impact.
- C. The elastic ball experiences the greatest acceleration 15ms after impact.
- D. The elastic ball experiences the greatest acceleration 15ms after being dropped.

11. The National Retail Federation introduced the term "Cyber Monday" in 2005 to describe a sharp rise in online revenue and traffic the first Monday after Thanksgiving. The graph at left in the tr -plane approximates the total revenue, r , in millions of dollars, from Cyber Monday sales in the year t years after 2009. What is the best interpretation of the portion of the graph to the left of the r -axis?

- A. It refers to loss of revenue.
- B. It refers to revenue in years before 2009.
- C. It is irrelevant, because you cannot have negative revenue.
- D. It is irrelevant, because there were no Cyber Monday sales before 2009.

12. The graph at left in the mf -plane relates the length in meters (m) of a particular thickness of guitar string to the frequency in Hertz (Hz) at which it will vibrate for a first harmonic note. By what factor does the frequency decrease between string lengths of 0.5m and 0.6m?

- A. 0.16
- B. 0.5
- C. 0.6
- D. 0.75

13. The graph in the xC -plane at left shows the long run average cost curve for a company producing appliances. The function C gives the average production cost per appliance when the total output is x appliances per day.

Approximately how many appliances should the company produce per day to minimize average production cost?

- A. 28 appliances
- B. 50 appliances
- C. 600 appliances
- D. 1200 appliances

14. A foreign species of insect has invaded a small island and begins to consume the island's mustard plants over a time, T , in months. The area inhabited by mustard plants, A , in acres (ac) immediately after the insect's introduction is 20 ac, and after 6 months the mustard plants disappear from the island. Which of the following graphs in the TA -plane could represent this situation?

15. A loan is paid back with increasing payments. The balance of the loan upon purchase is equal to \$6,000. The balance reaches a maximum 2 years after purchase and 5 years after purchase it reaches \$0. If L is the balance of the loan in thousands of dollars and t is the time since the purchase, which of the following graphs in the tL -plane represents this payment plan?

16. The graph at left in the sC -plane shows the hourly cost C in dollars to a small clothing factory producing s shirts in one hour. Which of the following is correct regarding the average cost per shirt when producing s shirts in one hour?

- A. The average cost always increases as the number of shirts produced in one hour increases.
- B. The average cost always decreases as the number of shirts produced in one hour increases.
- C. The average cost reaches a maximum when the number of shirts produced in one hour is 100.
- D. The average cost reaches a minimum of 0.25 dollars per shirt per hour.
