正确答案：D 你的答案：D

参考解析：
本题考查的是Kotlin中构造方法的写法。初始化执行语句不是必须放置在init块中，如果不写init，可以在定义属性时直接将主构造器中的形参赋值给它。例如

```
class Person(username: String, age: Int){  
  
    private val username: String = username  
  
    private var age: Int = age  
  
}
```

A

```
class Person constructor(username: String, age: Int) {  
  
    private val username: String  
  
    private var age: Int  
  
    init {  
  
        this.username = username  
  
        this.age = age  
  
    }  
  
}
```

B

```
class Person(username: String, age: Int) {  
  
    private val username: String  
  
    private var age: Int  
  
    init {  
  
        this.username = username  
  
        this.age = age  
  
    }  
  
}
```

C

```
class Person(private val username: String, private var age: Int)
```

D

```
class Person(username: String, age: Int) {  
  
    private val username: String  
  
    private var age: Int  
  
    {  
  
        this.username = username  
  
        this.age = age  
  
    }  
  
}
```
