?

## Ē

## 1. 单选题

```
private String name;
private int age;
private boolean sex;
public Student(String name, int age, boolean sex) {
    super();
    this.name = name;
    this.age = age;
    this.sex = sex;
}
```

## 您答对了

```
正确答案: B 你的答案: B
```

## 参考解析:

本题考察的是通过Intent对象实现Activity间的传值。通过Intent传对象时,使用的xtra(String,Serialiable)方法,值得注意的是:键这部分必须是String类型的,后证Serialiable的子类就可以了,所以正确的代码是:

```
mButton.setOnClickListener(new OnClickListener() {--
public void onClick(View v) {--
mStudent=new Student("jacky", 12, false);--
Intent intent=new Intent(FirstActivity.this,SecActivity.cl
intent.putExtra("stu", mStudent);--
startActivity(intent);--
}--
});--
```

```
A mButton.setOnClickListener(new OnClickListener() {
    public void onClick(View v) {
        Intent intent=new Intent(FirstActivity.this,SecActivity.cla
        intent.putExtra("stu", new Student( "jack" , "12" , fa
        startActivity(intent);
    }
}

));
**
```

```
B mButton.setOnClickListener(new OnClickListener() {--
public void onClick(View v) {--
mStudent=new Student("jacky", 12, false);--
Intent intent=new Intent(FirstActivity.this,SecActivity.
intent.putExtra("stu", mStudent);--
startActivity(intent);--
}--
});--
```

```
C mButton.setOnClickListener(new OnClickListener() {--
    public void onClick(View v) {--
        Intent intent=new Intent(FirstActivity.this,SecActivity.cl
        intent.putExtra("stu", new Student());--
        startActivity(intent);--
    }-
    });--
```

```
D mButton.setOnClickListener(new OnClickListener() {
    public void onClick(View v) {
        Intent intent=new Intent(FirstActivity.this,SecActivity.class);
        intent.putExtra("stu", mStudent);
        startActivity(intent);
    }
}

));
"
```
